

GLUVOK

Industrial Weighbridge Automation Prospect & Contact Report

Target region: Chandigarh • Panchkula • Mohali • Dera Bassi • Baddi

Objective

Identify and qualify potential pilot customers and channel partners for Gluvok's AI-enabled weighbridge automation platform.

Prepared for early-stage customer discovery and pilot outreach.

Important: Public-listing contact details and prospect fit should be independently verified before outreach. Inclusion in this report does not imply interest, endorsement, or a confirmed weighbridge installation.

1. Executive summary

Gluvok is positioned as an automation layer for existing weighbridges. It can combine number-plate recognition (ANPR), digital weight capture from a compatible weighing indicator, camera-based verification, evidence-linked records, and a cloud dashboard. The commercial goal is to reduce manual data entry, improve traceability, and make truck weighment more consistent.

Recommended initial segment: stone crushers and aggregate plants, followed by ready-mix concrete (RMC), cement dispatch operations, steel/scrap yards, and selected manufacturing sites. Prioritize locations with an existing electronic weighbridge and high truck throughput.

First-call objective: confirm weighbridge ownership, indicator model/interface, current manual steps, daily truck volume, and the person responsible for operations. Aim to book a site visit or a short demo—not to close a full deployment on the first call.

2. Prospect list and contact details

The following leads and numbers were assembled in the preceding conversation from business listings or company contact pages. They have not been independently re-verified in this report. Call to confirm that the number is current and belongs to the named business before sharing sensitive commercial details.

#	Business / prospect	Area	Contact number	Suggested approach
1	Rama Stone Crushers	Burj Kotian / Chandimandir, Panchkula	097797 11483	First-priority crusher prospect; qualify on-site weighbridge and manual weighing steps.
2	Haryana United Stone Crusher	Burj Kotian / Chandi Mandir, Panchkula	+91 99880 71707	Ask about indicator compatibility, vehicle identification and digital receipts.
3	Arora Gravels Stone Crusher	Rattewali, Panchkula	+91 98723 00663	Check daily truck volume, weighment workflow and decision-maker.
4	UltraTech Ready-Mix Concrete — Mubarikpur	Mubarikpur / Dera Bassi area	Not verified	Use official UltraTech website to locate the relevant plant contact; qualify weighbridge ownership.
5	Nuvoco Ready Mix Concrete Plant	Mohali / Phase 3 listing	+91 98760 55129	Verify exact site and number; ask for plant or dispatch manager.
6	Able Pharma	Gullarwala / Baddi	+91 62302 53932; alternate +91 87259 46339	Secondary fit; first confirm the site has its own weighbridge.
7	Duraton Cement	Rajiv Gandhi Technology Park, Chandigarh listing	+91 76580 09988	Ask for plant operations/dispatch contact; verify operational site and weighbridge need.
8	Multi-Weigh India Pvt. Ltd.	Industrial Area Phase I, Chandigarh	+91 92165 61284	Potential integration/referral partner; discuss compatible indicator protocols and referrals.
9	Star Weigh India	Industrial Area Phase I, Panchkula	+91 86993 54800	Potential channel partner for weighbridge owner introductions or integration projects.

Company website mentioned earlier: UltraTech Cement — <https://www.ultratechcement.com/> | Able Pharma contact page — <https://ablepharma.com/contact-us/>

3. Prospect prioritization

Priority	Segment	Why it fits Gluvok	Qualification check
1	Stone crushers / aggregates	Frequent truck movement; gross/tare weighing; load evidence and receipt automation.	Own weighbridge? Indicator make/model? Daily truck count?
2	RMC plants	Inbound aggregates/cement and outbound concrete logistics may create repeatable workflows.	Does the site weigh trucks on its own scale?
3	Cement / clinker dispatch	Potentially high volume and multi-site visibility; valuable but may have longer approval cycles.	Who owns weighbridge automation and IT/security approval?
4	Steel / scrap yards	Material-in/material-out, weight discrepancy checks, image evidence and audit trail.	Are scrap and dispatch weights captured digitally today?
5	Pharma / FMCG manufacturing	Gate logs and vehicle verification; full weighbridge automation only where scale exists.	Is there an on-site weighbridge and meaningful truck volume?
6	Weighbridge dealers / integrators	Can refer sites and help with indicator protocols, installation and support.	Will they partner, resell, or integrate?

4. Phone outreach script

Hello Sir, I'm calling regarding Gluvok, an industrial weighbridge automation platform under Lathey Weigh Trix. We integrate with compatible weighing indicators and cameras to automate vehicle number recognition, weight capture, image verification and digital weightment records. I wanted to understand how your plant currently manages truck weighing. Do you have an electronic weighbridge, and is the process still partly manual? If relevant, I'd be happy to arrange a short demonstration.

Ask for: owner, plant manager, dispatch manager, weighbridge supervisor, or operations head.

5. Discovery checklist

- Does the site own or operate an on-site weighbridge?
- What is the indicator make/model? Does it provide RS-232, RS-485, Ethernet, or another supported output?
- How many trucks are weighed per day, and during which shifts?
- How are vehicle number, gross, tare, net weight, date/time and receipts recorded today?
- Are photos captured? Is the plate readable in day/night/rain conditions?
- What are the biggest problems: queues, manual entry errors, duplicate weightments, disputes, pilferage, or reporting?
- Who approves a pilot and who manages IT/network/security?
- Can Gluvok run alongside the current workflow for a controlled pilot before any process is replaced?

6. Suggested pilot and follow-up

Before the site visit: ask for indicator make/model, photos of the indicator ports/nameplate, camera layout, estimated truck volume and current weightment steps. Do not request confidential plant records at the first contact.

During the site visit: map the truck journey; test stable-weight detection and duplicate suppression; check number-plate camera positioning; confirm evidence retention, offline behaviour and network availability; and document manual override/failure handling.

Pilot success measures: percentage of trucks automatically identified; percentage of stable weights captured correctly; duplicate/incorrect records prevented; time per weightment; exception rate; and operator acceptance. Agree the baseline and target with the site before the pilot.

Next 7 days: Day 1—call the three crusher prospects; Days 2–3—follow up and qualify; Days 3–5—visit the best-fit sites; Days 5–7—run a demo and propose one narrowly scoped pilot.

7. Important verification note

This is an early prospecting document, not a verified procurement database. Contact numbers and site descriptions reproduced from the previous chat may be stale, incorrectly attributed, or associated with a branch rather than a decision-maker. Verify each contact through the business's official website or a second independent directory, confirm the physical site and weighbridge, and respect requests not to be contacted. No company listed here is represented as having agreed to a Gluvok demo or purchase.

Gluvok positioning statement: "Automate your existing weighbridge with vehicle recognition, digital weight capture, camera verification and centralized weighment records—without necessarily replacing the scale."
